

Highbury Thai Massage — August 2026

Prepared 10 September 2026 · Counted in shop: £315.00 · Shown in report: £511.00

Conclusion: neither figure is wrong. The shop and the report are counting two different things. The shop’s £315 matches the bills marked “Cash” exactly, to the penny. The report also includes cash taken as part of split payments, and one gift voucher bought with cash. One group of £155 is worth checking against the card machine.

Summary

SOURCE OF CASH IN AUGUST	BILLS	AMOUNT
Bills paid entirely in cash	7	£315.00
Cash portion of split-payment bills	3	£155.00
Gift voucher sold for cash	1	£40.00
Total shown in the report		£510.00
Counted in the shop		£315.00
Difference to explain		£195.00

The figure quoted was £511. This rebuild gives £510. The £1 is most likely a misread, or a date range ending 1 September instead of 31 August. It does not affect the finding.

Group 1 — Bills paid entirely in cash: £315.00

DATE	BILL	AMOUNT
11 August, 18:41	472	£55.00
11 August, 18:41	474	£55.00
14 August, 14:58	499	£40.00
14 August, 15:11	500	£40.00
16 August, 19:03	531	£40.00
19 August, 18:47	572	£40.00
21 August, 16:14	587	£45.00
Total		£315.00

This is exactly the amount counted in the shop. These bills contain no tips.

Group 2 — Cash inside split-payment bills: £155.00

These three are the ones to investigate.

DATE	BILL	BILL TOTAL	RECORDED AS	CASH PART
14 August, 12:23	496	£65.00	£60 cash + £5 card	£60.00
24 August, 16:50	635	£65.00	£55 cash + £10 card	£55.00
31 August, 14:05	717	£55.00	£40 cash + £15 card	£40.00
Total				£155.00

Each has an unusual shape: a large cash amount with a small card amount on top. That pattern is also what appears when a split is keyed by mistake and the customer in fact paid the whole bill on the card.

How to settle it. Compare the card machine or Stripe totals for 14, 24 and 31 August against what the system records as card takings on those days.

- If card takings are higher by **£5, £10 and £15**, the splits are correct and that cash should have been in the drawer.
- If card takings are higher by **£65, £65 and £55**, the customers paid entirely by card and the cash never existed. Nothing is missing.

Group 3 — Gift voucher sold for cash: £40.00

One gift voucher was bought with cash in August. That money goes into the drawer, but it is not payment for a treatment, so it is easily left out of a takings count. The report includes it because it is real money received.

Not verified

Cash paid out of the drawer for expenses reduces what is physically there at month end. It is recorded under Admin → Reports → Expenses. It could not be read for this report, because the PIN available signs in as a therapist rather than an admin. If anything was paid out of the drawer in August, subtract it before reconciling.

August takings in context

PAYMENT METHOD	BILLS	AMOUNT
Card	122	£7,705.50
Cash	10	£470.00
Treatwell	22	£420.00
Voucher redemptions	28	£246.00
Deposit paid at booking	1	£69.00

The £470 cash line here is bills only. Adding the £40 cash voucher sale gives the £510 in the summary. Voucher redemptions and deposits are money that arrived earlier, so they are not counted again as August takings.

Recommendations

1. **Check the card machine for 14, 24 and 31 August.** This is the only open question about real money, and it decides whether £155 is missing or was never cash.
2. **Check August expenses paid from the drawer** and subtract them before reconciling.
3. **Brief staff on the split payment button.** A bill paid entirely on the card should be recorded as card, not as a split.
4. **Report change available.** The Cash line is a single number today, which is what caused this. It can be split into three lines: cash bills, cash part of split bills, and vouchers sold for cash. The monthly count would then reconcile without anyone having to ask.
